.....

Help British wildlife in your garden by having one of our ponds installed.

Our ponds provide space for struggling species and help give biodiversity a boost by providing a home for frogs, toads, newts and dragonflies.

The pond is up to 6 feet long, 3 feet wide, 2 feet deep and includes a broad marginal area. To get it started, it comes with a variety of native UK plants, a few invertebrate species and 'pond extract' to seed your ecosystem.

It's a 1-day install and costs **£195***

*Although this one-off price excludes flexible pond liners, we can install them for an additional fee
